#### Table: Person

+   Column Name	
+   personId   lastName   firstName +	++   int

personId is the primary key column for this table.

This table contains information about the ID of some persons and their first and last names.

### Table: Address

addressId is the primary key column for this table.

Each row of this table contains information about the city and state of one person with ID = PersonId.

Write an SQL query to report the first name, last name, city, and state of each person in the Person table. If the address of a personId is not present in the Address table, report null instead.

Return the result table in any order.

The query result format is in the following example.

### Example 1:

'	•	New York City   Leetcode	•
utput:	•	<del></del>	
	lastName	+   city +	state
	Wang	Null   New York City	Null

ll in their city and state.

addressId = 1 contains information about the address of personId = 2.

True

Table: Employee

```
+----+
| Column Name | Type |
| id
            | int |
| salary
           | int
id is the primary key column for this table.
Each row of this table contains information about the salary of an employee.
```

Write an SQL query to report the second highest salary from the Employee table. If there is no second highest salary, the query should report null.

The query result format is in the following example.

## Example 1:

```
Input:
Employee table:
+----+
| id | salary |
+----+
| 1 | 100
| 2 | 200
| 3 | 300
Output:
+----+
| SecondHighestSalary |
| 200
```

+	-		

# Example 2:
