Table: Person

+ Column Name	
+ personId lastName firstName +	++ int

personId is the primary key column for this table.

This table contains information about the ID of some persons and their first and last names.

Table: Address

addressId is the primary key column for this table.

Each row of this table contains information about the city and state of one person with ID = PersonId.

Write an SQL query to report the first name, last name, city, and state of each person in the Person table. If the address of a personId is not present in the Address table, report null instead.

Return the result table in any order.

The query result format is in the following example.

Example 1:

1	2	+ New York City Leetcode	New York
+ Output:	+	+	+
firstName	lastName	+ city +	state
	 Wang		Null

Explanation:

There is no address in the address table for the personId = 1 so we return null in their city and state.

addressId = 1 contains information about the address of personId = 2.

True

Table: Logs

Write an SQL query to find all numbers that appear at least three times consecutively.

Return the result table in any order.

The query result format is in the following example.

Example 1:**

```
Input:
Logs table:
+----+
| id | num |
+----+
| 1 | 1
| 2 | 1
| 3 | 1
| 4 | 2
| 5 | 1
| 6 | 2
| 7 | 2 |
```

Output:	
+	+
Consecutive	Nums
+	+
1	1
+	+
Explanation: times.	1 is the only number that appears consecutively for at least three
